

TECHNOLOGY LAW

David Tenzer has served as general counsel for numerous technology and biotechnology companies, including those in the areas of:

- Lead generation in the insurance and the financial services industries
- Genetic engineering
- Power management
- Software development
- Medical devices

Our firm monitors new developments in both state and federal law involving e-commerce, including privacy and internet advertising regulations. The firm represents companies fully engaged in new technology, including system design and integration companies, web development and e-commerce firms, and telecommunications providers. We also help our traditional business clients navigate the challenges presented by issues such as electronic contracting and domain name disputes, as well as the protection, licensing, development and application of their intellectual property assets.

Whether your company is a new technology startup or a “bricks and mortar” enterprise seeking to take advantage of new opportunities, we can help you capitalize on today’s new technologies.
